An invisible surface treatment for wet slippery floors

Please visit www.antislip-uk.co.uk for information and relevant case studies

Shirtcliffe Contracts Ltd are now a preferred installer, by Surefoot Systems UK Ltd, of their market leading Antislip surface treatment for wet floors.

Antislip makes compliance with modern health and safety requirements so much easier!

Antislip is a unique virtually invisible liquid applied safety surfacing treatment for: ceramic tiles, quarry tiles, marble, granite, porcelain terrazzo and concrete.

Antislip can be applied with minimal disruption and downtime and can be walked on immediately following application.

Antislip is effective with a wide variety of footwear and provides outstanding anti-slip properties even where bare feet are concerned.

Antislip increases the coefficient of friction or slip resistance by moisture reaction not by an acid etching process.

Antislip has proven in practical site conditions to reduce the growth of bacteria.

Antislip unlike traditional safety surfacing treatments does not alter the aesthetic appearance or integrity of the substrate therefore decorative tiled or natural stone surfaces such as marble or granite appear virtually unchanged.

Applications include swimming pools, showers, reception/entrances, production areas, kitchens, toilets and other high risk areas.

Shirtcliffe Contracts Ltd are also the regions leading commercial flooring and hygienic wall cladding specialists - please see our website: www.shirtcliffe-flooring.co.uk
